

Omprakash Dwivedi

Generative AI Engineer | AI-Assisted Development | Data Analytics

dwivediomprakash450@gmail.com | +91 9993330294 | Indore, India

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

B.Tech graduate in Computer Science Engineering (AI & ML) building toward a career as a **Generative AI / AI Engineer**. Hands-on GenAI exposure includes integrating the **Anthropic API** into a working Python script and completing a GenAI-focused data analytics simulation with **Tata Group (Forage)**, applying generative AI to exploratory data analysis and designing an agentic-AI-driven strategy for a financial-services use case. Comfortable across the full build cycle — API integration, data processing with Python and Pandas, forecasting fundamentals, and SQL/Power BI-driven analytics — demonstrated through an AI-powered demand-forecasting platform, a content analytics application, and a full-stack carpooling platform. Seeking an entry-level Generative AI Engineer role to apply LLM concepts and AI-assisted development to build practical, intelligent applications.

Technical Skills

- **Generative AI & LLM:** Prompt Engineering, Generative AI Concepts, LLM Fundamentals, NLP Fundamentals, AI-Assisted Development, Anthropic API
- **Programming:** Python (Pandas, NumPy)
- **Machine Learning & Forecasting:** Machine Learning Fundamentals, Time-Series Forecasting (SES, Holt's Linear, Moving Average, Ensemble Methods)
- **Data & Analytics:** SQL (Joins, Window Functions), Power BI (Data Modeling, Dashboards), Advanced Excel (Pivot Tables, Lookups)
- **APIs & Application Development:** FastAPI, REST APIs, TMDB API, Anthropic API
- **Development & Tools:** MongoDB, Git/GitHub

Professional Experience

Mittsure Technologies

Oct 2025 – Jan 2026

Relationship Manager

- Managed client relationships and tracked performance metrics to support informed, data-backed business decisions
- Communicated with stakeholders to identify needs and translate them into actionable follow-ups, strengthening client-facing communication and problem-solving skills

Key Projects

Project FORESIGHT — AI-Powered Demand & Inventory Intelligence Platform

Python, Forecasting Models, Three.js

- Built an AI-powered demand and inventory intelligence platform as an internship submission for Zidio Development, combining a multi-model forecasting engine with interactive visual analytics
- Implemented and compared multiple forecasting approaches — Simple Exponential Smoothing, Holt's Linear, Moving Average, and an Ensemble model — to generate demand predictions
- Delivered the platform as a multi-page application featuring Three.js-based 3D visualizations, making inventory and demand trends easier to interpret and act on

AI-Assisted Analytics Script — Anthropic API Integration

Python, Anthropic API

- Built a Python script integrating the Anthropic API to experiment with AI-assisted data analysis workflows beyond traditional, manual analytics

- Used the project to explore prompt-based automation of analytical tasks, clarifying the practical boundary between conventional analysis and AI-assisted analysis

Netflix — Content Discovery & Analytics Platform

Python, FastAPI, Pandas, TMDB API, Power BI

- Built a content-aggregation application integrating the TMDB API via FastAPI to collect and consolidate movie/show metadata across Netflix, Prime Video, and Hotstar catalogs
- Processed and transformed the aggregated dataset using Python and Pandas, then modeled it into an interactive Power BI dashboard to surface genre and rating trends
- Enabled faster, data-driven exploration of content-discovery patterns, translating a raw multi-platform dataset into an actionable analytics view

SplitFare System — Carpooling Platform (Major B.Tech Project, AI-Assisted Development)

React.js, Node.js, MongoDB, Leaflet, UPI

- Directed AI coding assistants (Claude, ChatGPT, Cursor) to build a full-stack carpooling platform, owning the system architecture, feature scope, and integration decisions across a React.js frontend, Node.js/Express.js backend, and MongoDB database
- Defined and validated core functionality — location-based ride matching, real-time seat-availability tracking, secure authentication, and UPI payment integration — reviewing and debugging AI-generated code against requirements
- Deployed the application via Render and Vercel and documented the system design and architecture in a 46-page technical report

Education

Bachelor of Technology — Computer Science Engineering (AI & ML)

2022 – 2026

Baderia Global Institute of Engineering and Management, Jabalpur — CGPA: 7.7

Certifications & Training

- **Data Analytics Using GenAI — Tata Group, Forage Job Simulation:** performed GenAI-assisted exploratory data analysis, designed a no-code predictive framework to assess customer delinquency risk, and outlined an agentic-AI-driven collections strategy for a financial-services use case
- **Data Analytics Job Simulation — Deloitte Australia, Forage:** applied data analysis and forensic-technology workflows to support investigative, evidence-based business scenarios
- **AI Tools and ChatGPT Workshop — be10x:** hands-on session on practical GenAI workflows for analysis and productivity
- **Python Essentials (PCAP) — Cisco Networking Academy**
- **Get Started Building with Power BI — Microsoft Learn**
